

LEADING THE TRANSFORMATION OF AI MOBILITY

Founded in 2014, we are visionary pioneers transforming future mobility.

We believe in a simple truth:
**Technology is the game changer for future mobility,
shifting the focus from horsepower to brainpower.**

PHYSICAL AI

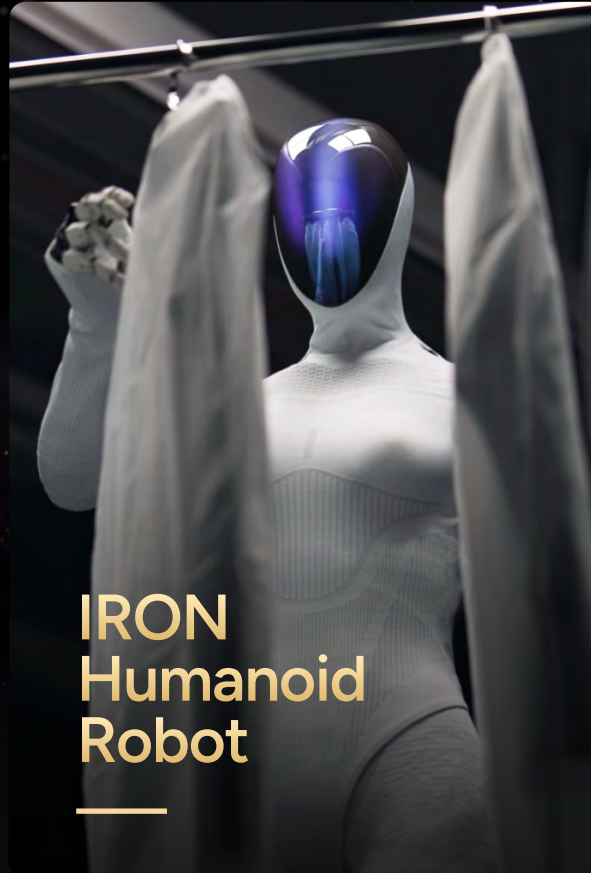

A silhouette of a human figure, possibly a classical statue, is depicted against a black background. The figure is composed of a dense field of small, glowing particles in shades of blue and orange, giving it a digital or particle-based appearance. The particles are more concentrated in some areas, like the head and torso, and more sparse in others, like the limbs. The overall effect is a blend of physical form and digital data.

Physical AI is AI in action

Deeply integrated with the physical world,
enabling machines to sense, decide,
and interact with their environment.

Physical AI

Physical AI is AI in action, deeply integrated with the physical world, enabling machines to sense, decide, and interact with their environment.

OUTPUT

Beautiful, Smart Design

A woman in a dark jacket and brown pants is walking a large, fluffy, light-colored dog on a leash. They are on a cobblestone street. In the background, a sleek, silver, modern car is parked. To the left, there is a storefront with a large window displaying various bottles and jars. A vertical signpost stands near the entrance of the storefront.

FROM AI TO REALITY. THE  PHILOSOPHY.
